

Database & Python Experience - Issues, Solutions & Tools

1. DBA Support (8 Months)

Issues List: Connectivity failure, User access issue, Failed jobs, Slow queries

Issue: Database Connectivity Failure

Problem: Application unable to connect to database.

Solution: Checked DB service status, restarted service, validated connections.

Tools: SQL Server/MySQL Workbench, Logs

How: Used tools to check connection status and logs, restarted services.

Issue: User Access Issue

Solution: Verified roles and granted permissions using SQL.

Tools: SQL tools

How: Executed GRANT statements.

Issue: Failed Jobs

Solution: Checked logs and reran jobs.

Tools: SQL Agent / Cron

How: Monitored job history and triggered rerun.

Issue: Slow Query

Solution: Added indexing.

Tools: SQL

How: Analyzed query and created index.

2. Data Administration (1 Yr 3 Months)

Issues List: Data inconsistency, Missing data, Duplicate records

Issue: Data Inconsistency

Solution: Used joins to validate and fix mismatch.

Tools: SQL

How: Compared tables and corrected data.

Issue: Missing Data

Solution: Checked jobs and reprocessed.

Tools: Logs

How: Identified failure and reran jobs.

Issue: Duplicate Records

Solution: Identified and removed duplicates.

Tools: SQL

How: Used GROUP BY and cleaned data.

3. Python Developer (2 Yr 3 Months)

Issues List: Manual work, DB errors, Django issues

Issue: Manual Work

Solution: Automated using Python scripts.

Tools: Python

How: Wrote scripts for validation.

Issue: DB Integration Error

Solution: Used exception handling.

Tools: Python PDBC

How: Handled connection errors using try/except.

Issue: Django Issue

Solution: Fixed MVT flow.

Tools: Django

How: Debugged models/views/templates.
